

MicroDose Mammography SI

New Spectral benefits,
proven low dose.

Transforming care, **together**

Philips commitment to transforming care together with clinicians is reflected in the MicroDose SI system.

Drive clinical performance

Photon counting and spectral technology are strong platforms for further advancements in mammography. Philips works closely with clinical partners to advance the art and science of mammography, and to explore the potential of spectral imaging.

Enhance Patient Experience

Women appreciate the short examination time, the low radiation dose and the curved and warm breast support.

Ensure economic value

MicroDose SI is designed to enable the high throughput required for screening, while delivering excellent patient care.
